FARM AND GARDEN. HOW MONEY IS MADE BY FARM.

Much labor is done on farms, says a contemporary, that is not farming in its true sense. By such labor no money is ever made. A man may support himself and his family, keep out of debt, and have a few dollars in his pocket by practicing the most stringent economy. If he is otherwise than industrious and sober, he is on the down grade with loose brakes, and the end is soon reached. But farming in its true sense, is a profession equal in dignity to that of law or medicine, and needs equal s'ndy, mental capacity and intelligently directed labor to command success in it.

The principle which underlies the practice of the true farmer, must be well understood and a steady constant course of operations must be followed. Having thoroughly learned the nature and capacitw of the soil he possesses, and chosen the rotation most suitable, and the stock to be most profitably kept upon it, he does not markets and tad raises his regular crops, and keeps his land in regular increasing fertility. No special cry tempts or fright-

He does not talk dairy this season and crops the next, but doubtless if any particular product be in demand and brings a good price, he has some of it to sell and reaps his share of the advantage. He saves as much money as some men make, by care and economy in purchasing and preserving tools, seeds, manure and machines; and his business habits and constant readiness for all occasions, give him reasonable security against the effects of adverse seasons and had weather. Always prepared, he is never too late, and always calm, he is never too soon, thus, "taking time by the forelock," he has the stern old tyrant a this command, and turns him at his will. He has no losses, and his gains are steady.

IMPORTANCE OF THE ROTATION OF CHOPS.

Farming, as it has in too many instances been conducted, impresses the Rural World with the conviction that books and agricultural papers have not received a general invitation to aid the plow in any way, but the production of crops has been more a matter of chance and necessity than of any systematic course of cultivation. The owners of the land do not seem to care how the crops are produced, if the immediate pecaniary results are of a satisfactory character. It is now pretty generally known, says that paper, that certain principles underlie the science of the cultivation of the soil, and that unless these are understood and made the basis of our system of cropping, manuring and cultivation, we shall fail in producing amual crops of an average yield. The general desire among farmers, however, is to get as much grain from the soil, with as little outlay as possible, and yet keep the land in "good heart," or, in other words, in a productive condition. It is well known that the different crops take from and exhaust the soil of certain elements of food peculiar to themselves; it is for this reason mainly that the adoption of a systematic rotation of crops is so important. If this is not done, a general failure will inevitably take place sooner or later. It is this random, reckless lack of system in our farming operations, where the soils were originally not very fertile, that is producing such disastrous results: the first thing, therefore, to be taken into consideration in order to effect the desired change, is to adopt a proper system of rotation of crops.

In determining such a course of rotation, the nature of the soil and of the crops to be produced from it, must be considered in their relation to each other.

It is now generally conceded that all the cereal crops derive their food principally from the soil, and that each species of them requires cartain kinds and proportions of

food peculiar to themselves. A proper rotation of crops is usually termed a six shift course, and is arranged in the following order: green crops, grain, clover, grain, beans or potatoes, grain. The rotation is arranged in this way so that only one-half of the cultisuccessive courses, is it not evident that the safest means to avoid the ravthe supply of phosphoric acid, potash, soda | the most advantageous mode of putting in and other elements of which the supply in | the seed. Mr. Geo. Geddes, of New York, solls of an ordinary fertility is exceedingly | well known to the agricultural public as a limited, will, if such a course of cultivation important farm implement to the raiser of back to its old resting place in Loudoun be persisted in, soon render the land unpro- winter wheat, planting all the seed to a Castle, Scotland, by the Countess of Louductive? The course of rotation men- uniform depth, and raising a barrier to pro- doun. "This sword," says a Glasgow pationed is such that at least two top dressings of barn-yard manure could be given ing period has passed in the spring, then the to the land, the first being given to the some similar crop. The system of rotation | vest, and for the further object of breaking one for any special locality. Good common rolling, if done at the right time, is of great sense and close observation will enable the value to the young wheat, assists materialthinking farmer to devise a course that will | ly in covering the clover seed, but it must enable that to maintain and increase the not be done until after the clover seed has fertility of his land and put money in his been sown.

TION OF WHEAT.

the middle of October, get their seeding done. The work of plowing, and the preparation of the ground for the seed bed should now be attended to without de lay, if not already done, and the earlier the better, for we believe most observant farmers admit that the longer in reason the ground is broken up before seeding, the better it is for the crop.

The atmosphere has a beneficial effect upon the land. The best quality of land for wheat is a clayey loam, but there are other solls, such as gravels, sands, and the like, upon which wheat is constantly grown with ss; but under all circumstances the seed-bed should be dry, and where not nat-urally so, draining and ditching should be resorted to. On all the inferior wheat lands the crop is most subject o disease and to injury from the depredations of insects, not having the power to outgrow and overcome these enemies, and high manuring and perfect cultivation are solutely necessary to secure average crops on these lands. Care must be taken that the land for wheat is not plowed when too

wet, and the more perfect the drainage the sooner will the excess of water pass away, and then comes the time for the careful farmer to till his land. The following hints upon this subject from the pen of the most successful wheatgrower in New York are now in season. He come too dry it is not only hard to plow, but the work cannot be so well done as it can at the time that the land Is just in the right condition as to moisture. Practical skill alone can decide as to the best time,

Now, assuming that we have land that has been well managed, one plowing will completely pulverize it, if this plowing is done at the right time and in the most skillful manner. Narrow furrows made by plows just adapted in the shape of their mold boards to the land are necessary. Complete disintegration of the particles effected by just moving them on each other, and it is not necessary to lift the furrow slice high up, or move it far, to do this; the least breaking of the cohesion is sufficient. The harrow follows to level the surface and more perfectly prepare the seed

It may and often will happen that by reason of wet weather and management there will, in clay soils, be small lumps after the plowing and harrowing have been done. In such a case the roller or clod-crusher must be used to reduce these lumps

to powder. Next comes the drill to sow the seed in. A good drill following the roller not only sows the seed in the best manner, but it culivates the land far better than any harrow. The dril! spouts lift the surface soil and throw it into ridges, that by falling back cover the seed lightly at first, and still deeper as the weather acts upon them during the fall and winter, and following spring, when alternate frosts and thaws are to be expected. The rougher the drill leaves the surface of the land the better, but clavey land in the fall, after the seed is sown, should not be rolled.

In former numbers we have given the experience of Judge Watts, of the Agricultural Bureau, as well as others, as to the value of deep plowing and a thorough pulverizing of the soil for the wheat crop, and we cannot too strongly impress it upon the attention of the wheat grower, as we deem it one of the most essential means of success. Although we will not say that a good plowing will be equal to an addition of fifteen bushels of corn per acre to what the swerve from his chosen course, but in good land would otherwise yield (as stated in perience), still we have never entertained a oubt that it is one of the prerequisites of uccess to the crop, and if the sub-soil plow s used in connection with the common plow, it is equal to a good dressing of ma-

ecure seed for the crop, and at the same chase for your crop. Among the new varieties of wheat of late years introduced we find in the report of the Agricultural Bureau, just issued, several varieties which have been found to be very successful, among them the Fultz, originally introduced Whilst we would not recommend any ex- always endeavored to do his duty, wherevhink it exceedingly advantageous to change the seed at least every second year, and if you can do no better, effect an exchange with some of your neighbors. Seed wheat should be gotten out with the flail. When the machine is used many of the grains are cut, and the germinaion is rendered doubtful. leaning of the wheat from all impurities, as far as possible, should be at-

ended to previous to sowing; a strong rine should be made of salt and soft waer, and in this the grain should be washed for five minutes, taking care to skim off all he light and foreign seeds. If the grain be smutty, this washing should be repeated in another clean brine. when it nay be taken out and intimately mixed with one-twelfth its bulk of fresh, pulvarized quick-lime. This kills all and insures early, rapid growth. When the seed is not smutty it may be prepared y soaking or sprinkling it with stale urine, and afterwards mix with the lime, and if well done this also will pervent smut, though the first is most certain. In England the lissolved in as much water

use of sulphate of copper is the most prevalent mode of preparing seed wheat as a preventive of the smut, one pound will thoroughly wet the grain being sufficient for four bushels of wheat. As soon as it is dry it can be sown. The quantity of | to the citizens of our county for their votes. John Johnson, of New York, approves of the smaller amount of seed than is usually that he was neither good-looking sown. A very nice experiment, however, or an eloquent speaker, but if they would was made last year by Prof. Daniels, of the University of Wisconsin Experimental Farm, to test this question, by which it was | who entertained the crowd for a short found in six plots of seed sown, from three | space of time. We neglected to mention pecks to two bushels, the weight of grain our friend Jacoo Luck, who announced

Three fourths of a bushel of seed to the acre produced 263 fbs. grain, or 17.53 bushels, or 820 fbs. straw and grain. One bushel produced 2971 ths., 19.88 bushels, or 899 fbs. grain and straw. One and a fourth bushels produced 332 ths., 22.18 bushels, or 1,146 ths. grain and

favor of the largest quantity sown; for in-

One and a half bushels produced 3964 fbs., 26.16 bushels, and 1,334 fbs. grain and

2 bushels produced 4551 lbs., 301 bush els, and 1,412 lbs. grain and straw. On the plot where 12 bushels were sown local cause gave an unfair result; in each instance the weight per bushel was 60 lbs. or more, the highest being in the plot where 2 bushels of seed were sown, which

was 601 lbs.

The seed should be sown not less than two nor more than three inches deep, and as a general rule we believe that from the 25th September to the 15th October is the most available time to sow. An observant farmer of this State thinks that wheat sown before the 15th September will escape th vated land will be in grain at the same rust, but will be subject to the averages of time. Suppose, however, that wheat, oats the fly. Some good farmers preand barley follow each other in three fer to sow only after a frost, at ages of the fly. The drill is undonotedly tect feeble plants from winter killing. But these barriers must be left until the tryroller should be used for the double purpose green crops the first year, and the second of leveling the ground, so that the resper du ing the fifth year, to beans, potatoes or | will move smoothly over it in time of hargiven may not be applicable to all localities, and crushing the surface soil after the rains but will serve as a guide in determining and frosts of early spring are passed. This

In sections of country that are subject to open winters, it is advisable to run the TIMELY HINTS ON THE CULTIVA- drill at right angles to the direction of the prevailing winds. In his own farming in The month of September will be a busy in cases where it was necessary to cross one to the wheat growers, as the most of the line of the winds, Mr. Geddes has drilthem by the end of the month, and up to | led the field diagonally!"

Don't tell me of to-morrow! If we look upon the past, How much that we have left to do We cannot do at last!

To-day! it is the only time
For all on this frail earth;
It takes an age to form a lifeA moment gives it birth. Don't tell me of to-morrow!
Give me the man who'll say,
Whene'er a good deed's to be done,
Let's do the deed to-day;
We may all command the present,
If we act and never wait,
But repentance is the phantom
Of the past that comes too late.

To the Editor of the Union and American.

LEWISBURG, TENN., Sept. 2, 1872.-Gov. Jon C. Brown addressed a large and attentive audience here to-day for two hours, on Federal and State politics. Not more than one week ago it was announced through posters that the Governor would he here, and notwithstanding the short notice and busy season with the farmers, the people commenced pouring in from every part of the county, and by 11 o'clock several hundred were gathered around the stand to see, shake hands with and greet the appearance of their choice for Governor of Tennessee. There was no mistaking the indications of approval says that if clayed land is allowed to be- as the speaker opened out and continued to expose the usurpations of the Radical party, headed by Grant, in the passage and enforcement of the Ku-Klux laws, suspension of the writ of babeas corpus, and many others destructive of human liberty and violation of the most sacred rights guaranteed by the Constitution of the States. Suffice that the Governor didn't deal in bare assertions, but had the documents, and made good with proof incontro-

vertable every proposition.

He also made a modest yet telling allusion to the policy of the State government since and during the short time he has been Governor of the State-announcing himself a candidate for re-election, called out not by any wish or electioneering of himself, but by the unanimous voice of the convention representing the people on the 9th of May.

He came out squarely and unconditionally for Greeley and Brown. The former he said was an honest man, as well as a great man, never undertaking anything without accomplishing it, from the time he co mmenced his war upon American slavery to the time he was nominated at Cincinnati and Baltimore; forcing the party in power to pass the General Amnesty Bill, and thus removing the ban under which so many good men in the South have been heldincluding his success in overcoming and conquering the great rebellion in the South, which the Governor said he had some 'slight recollection." The Governor closed his able speech of two hours by exhorting the people to organize, that the alliance of the great Democratic and Liberal movement was to defeat the monstrous and unparalleled usurpations of the party in power; said that political parties and conventions were no new things in the country, that they had been in existence ever since the second term of President Washington's administration, and that now since light was beginning to break upon us from the great North, throwing now and then some hope of relief to the down-trodden and oppressed South, every man in the South should take his place, and those in favor of overthrowing the Grant-Radical dynasty should at once unite with the Liberal movement,

headed by Greeley and Brown. The Governor gave a succinct history of political parties in the government of the United States and in Tennessee, showing perched upon the standard of organization and united effort; said he did not wish to bring the war or his individual war record into this canvass, but that he was accused of being connected with a militarg ring, and an effort was being made The plowing done, the next thing is to to have him ostracised on that account. He denied belonging to or having any sympaime to make preparation to have on hand | thy with any such ring; that he had figured n time the manures you may intend to pur-chase for your crop. Among the new variwalks of civil life into the line of a private soldier as a volunteer; was made Captain, Colonel and General without solicitation; that when the war was over he again retired to private life, and there remained unn Pennsylvania, the Tappahannock, the til called out by the people and elected Diehl, the Walker, the Boughton, etc. Chief Magistrate of the State; that he had enditure at an undue high price, still we er placed, and upon his record he was will ing to stand or fall.

Thanking the good people of Marshall for their patient hearing he closed, when the Lewisburg brass band sounded a note to the tune of Dixie and several other patriotic airs. Let every county in the State do as well

as Marshall county, and John C. Brown will be the Governor of Tennessee for the next two years after the ides of November

next, against any and all foes.

CONGRESSIONAL SPEAKING. prespondence of the Union and American ASHLAND CITY, TENN., Sept. 3, 1872. -If you will give me a little space in the "people's paper," I will let you hear something from our little county of Cheatham. J. W. Hunter and A. Stallcup have been holding a protracted meeting at this place mut, cleans out weeds from the grain, for the last ten days. It is broke up, and they have returned back to your City of Rocks. We had five prisoners in our county jail last week, all being colored. Three of them having given bond for their appearance before his honor Jas. E. Rice at his next term of court at this place was released. All of our county officers gave bond and were qualified yesterday for

business, it being county court day. The political canvass was vesterday opened in our town. The candidates for Congress, in tones of eloquence, appealed seed to the acre is, by the drill, 1; to 1; Hon. Ed. I. Golladay, our present repre-bushels, or two bushels if broadcast. Whilst sentative, opened the battle, gave an acsentative, opened the battle, gave an account of his course in Congress, and told bushels seed to the acre, Mr. Mechi, some jokes on his opponents. He was folnally or more celebrated as a farmer in lowed by W. G. Brien, who expressed him-England, advocates a smaller quantity, and | self in favor of Andrew Johnson. Then the tendency in both countries is rather to came Jackson B. White, who said let him run by weight, he would lick them all. Last came our friend Jo. C. Stark. was, in proportion to the amount sown, in | himself as a candidate to represent Cheatham, Dickson and Houston in the Lower Branch of the State Legislature. He is having quite an interesting time as he has no opponent. POTTS.

Monday night, Sept. 2. THE sword of the famous Scots hero, William Wallace, was recently conveyed per, "has been preserved in Loudoun Cas-tle from the death of Wallace until five years back, when it was removed by the late Marquis of Hastings to his seat in Leicestershire. On the death of the Marquis in 1868 it passed into the possession of the present Countess, who has just brought it back to its old home. It will be remembered that the mother of Wallace was a daughter of Loudoun, and that on the death of his uncle, Sir Reginald Crawford, of Loudoun (hanged by the English at Ayr), Wallace had the custody of his only daugh-ter, Susannah Crawford, of Loudoun, who married a son of Sir Neil Campbell, of Argyll, and was ancestress of the present Countess of Loudoun, the heriditary custo-

dian of the sword of William Wailace. Very near together are hearts that have no guile .- Confucius.

WHO WILL EXPLAIN?

To the Editor of the Union and American: Happening near the line between Dyer and Gibson, just west of Yorkville, and and Gibson, just west of Yorkville, and hearing that the lightning "had played the wilds" with one Mr. Travis' cotton patch, I visited the scene, in company with James Scott. On reaching it, we found the cotton within a circle, of somewhat irregular periphery and diameter of 60 odd feet, all dead, and looking as if parched by heat of sufficient meanness to kill immediately. Beyond this line, the injury diminished from the ground by a definitely marked line, to the top leaf. The area of partial effect was elliptical. Possibly, on measurement, the elliptical. Possibly, on measurement, the area of total effect would prove the same. While the line of vertical effect is "definitely marked," it is undulating rather than

If the movements of cyclones were sufficiently understood to bear the classification, I should say it was evidently the work of a ricohet cyclone. DYERSBURG, Sept. 2.

The Public Library of Kentucky.

Second Grand Gift Concert.

DAY OF THE DRAWING FIXED No Postponement from September 28.

The Trustees of the Public Library of Kentucky being satisfied from the large sale of tickets already made, and the daily increasing demand for them, that there will be no occasion for postponing the second drawing in the Gift Concert in aid of the Public Library of Kentucky, have instructed me, as their Agent and Manager of the Gift Concert, to say to the public and ticket holders that the drawing will positively take place on September 28th prox., and will not be postponed. An active demand for tick-

ets comes from every State and Territory of the United States, and from the Canadas, giving assurance to the Trustees that no circumstances can prevent a drawing at the appointed time. A sufficient clerical force is engaged to keep up with the orders for tickets, and in

order that this office may be relieved of the immense pressure incident to the business for the week or two immediately preceding the drawing, agents especially, [and those desirous of procuring tickets, are requested to send in their orders immediately, as sales will have to be closed in time to make the necessary preparations for the drawing. It is the wish of the management to fill every order for a ticket, as well as to sell all the tickets, but those who apply first must be supplied; an l, if those who put off buying until sales are closed have their money returned instead of the tickets ordered, as in the first Gift Concert in December last. when thousands of dollars that came too late were sent back, that they will have none to blame but themselves.

THOS. E. BRAMLETTE, Agent Public Library Kentucky. | 224c; Texas 224c. LOUISVILLE, KY., Aug. 19, 1872.

au23 deod2w&w2t The Stomach as an Avenger.

For every breach of the laws of health that we ommit the stomach inflicts a penalty. Headache, biliousness, nervous tremors, constipation colic, heartburn, nausea, debility and mental depression are only a few of the punishments which an outraged stomach is capable of imposing upon us. To bring back this vengeful organ o its normal condition-to placate, invigorate and regulate it-there is nothing in the wide world so potent as a course of Hostetter's Stomach Bitters. Under the operation of this beneficent vegetable corrective and tonic the gastric uice becomes a pure and healthful solvent and resumes its natural flow. The effect is the same on the biliary secretion, and in fact on all the fluids of the body, and the final result is the removal of every painful or unpleasant sympton occasioned by the rebellious action of the diges gestive organ. sep3 deodiw&w1t 3dp
